

The Adolphe de Rothschild Foundation was founded over a century ago in the heart of Paris and treats all head and neck disorders, from screening until surgery for the most complex cases, be there emergencies or scheduled operations of adults and children. The Foundation tops the rankings of the best French hospitals every year and boasts cutting-edge techniques and surgical teams.

INNOVATION, RESEARCH AND TEACHING

A KEY PLAYER IN MEDICAL RESEARCH

Our hospital's clinical research team plays a key part in our most recent scientific progress. They produce over 150 publications a year in several fields of clinical research. The Foundation currently has 86 research projects underway and benefits from high-level institutional support.

UNIVERSITY HOSPITAL

Our hospital is a natural setting for talent, progress and innovation. Every year, it attracts students from the best universities and takes part in international exchanges and development programmes. The Foundation is proud to convey its values and best clinical practices to all these healthcare professionals.

INNOVATION

Our hospital is a leading center for the identification of new diagnosis and therapeutic technologies. The hospital attracts health industry manufacturers with which it runs high-level research programmes.

A NETWORK OF PARTNERS

The Foundation has built up a partnership of the best facilities in order to guarantee continuity of care.

COMMITMENT

CONVEY, INNOVATE AND COMMIT

These are the values underpinning the Adolphe de Rothschild Foundation, they convey the unwavering commitment to medical excellence and social responsibility of both the Foundation's staff and the de Rothschild family.

THE EDMOND DE ROTHSCHILD FOUNDATIONS

The Adolphe de Rothschild hospital is part of the Edmond de Rothschild Foundations, an international philanthropic network which continues to apply the same principles in the transformation of the philanthropic legacy by identifying innovative solutions and creative partnerships in education, the arts, health and social entrepreneurship.

QUALITY CARE

PATIENTS AT THE HEART OF THE PROCESS

Our teams are driven by a single unique concern: with humanity and devotion they seek to care for patients in the best possible environment. Our hospital welcomes patients in a fully refurbished and pleasant building in the centre of Paris.

ADULT AND PAEDIATRIC CARE

All of the departments delivers care for adults and children, including newborns. Our hospital is even recognized as being a leading centre for paediatrics in several areas, such as medically-resistant epilepsy, ophthalmology and neurocognitive disorders.

THE HIGHEST STANDARD OF EXCELLENCE

Staff expertise and qualifications and our hospital's excellent infrastructure mean that it has been certified by the French Health Authority (the French equivalent of the Joint Commission) "without any reservations or recommendations". Only 15% of French healthcare facilities receive this score.

CUTTING-EDGE MEDICAL TECHNOLOGY

Our hospital boasts the most advanced biomedical equipment to guarantee the best possible service. Every year, the Foundation invests heavily in the latest equipment.

CARE

OPHTHALMOLOGY

The Foundation has been a benchmark institution for eye disorders for over a century. Its teams of experts, working in a department comprised of six services, cover all ophthalmology specialties, from screening to refractive surgery to more complex corrections for cataracts, glaucoma, orbital disorders, strabismus, eye inflammations and eye infections with techniques developed for the conjunctiva, the cornea, the retina, eyelids, and tear ducts. Further specialties are housed here with paediatric ophthalmology starting at birth and neuro-ophthalmology, thus incorporating all opportunities to provide care to eye patients.

NEUROLOGY

The Neurology Department treats all central and peripheral nervous system disorders and specializes in treating inflammatory diseases of the nervous system, particularly Multiple Sclerosis. The department has a specialized Parkinson's disease unit, a memory evaluation unit, a neurovascular unit and also focuses on neurological visual disorders.

NEUROSURGERY

Our hospital treats all neurosurgical pathologies, such as skull base tumours, spinal problems, neuro-oncology and age-related pathologies. The department particularly specializes in functional neurosurgery, in treating Parkinson's disease and chronic treatment resistant pain. Our dedicated paediatric neurosurgery department has been developing a multidisciplinary approach for over 20 years, treating all pathologies of the brain and the spinal cord. The department enjoys international recognition for its treatment of treatment resistant epilepsy in newborns and children.

INTERVENTIONAL NEURORADIOLOGY

The Foundation has an interventional neuroradiology service specialised in the treatment of vascular malformations of the brain or spinal cord and strokes in the acute phase. The department's quality and technical facilities make it a world leader, for both adult and paediatric care.

ENT

The Ear, Nose and Throat and Cervicofacial Surgery Department treats all types of disorders in both adults and children: ear surgery, sinus surgery, base of skull surgery, ENT oncology, voice disorders, cervicofacial dystonia, deafness, vertigo, tinnitus, and snoring.

ANAESTHESIA AND INTENSIVE CARE

Our hospital is renowned for its expertise, research and teaching in anaesthesia of adults and children undergoing surgery on eye and brain disorders. All our procedures comply with best clinical practices. A resuscitation and intensive care department specializing in head and neck pathologies cares for the most serious cases and delivering post-operative care for those who have undergone complex operations.

IMAGING

Our hospital boasts the best latest-generation and low-radiation equipment for ultrasound, radiology, MRI and scanning. For both inpatients and outpatients, the hospital does brain imaging, angiography scans or angio-MRI for vascular exploration, screening for vascular diseases using the Doppler ultrasound, dental imaging, ENT imaging and orbital Doppler ultrasound.

INTERNAL MEDICINE

The internal medicine team cares for all inpatients who have multiple conditions and systemic diseases. The team specializes in spinal conditions, Graves' disease, pituitary gland diseases and chronic inflammatory rheumatoid diseases.

EMERGENCIES

Our hospital plays an important role in dealing with emergencies from across the region, whether they are ophthalmological (the Foundation is the only paediatrics centre in the Paris Region) or neuroscience-related (strokes, intra-cranial hematomas, meningeal haemorrhages). A senior staff on-call and duty system means that responsive quality care is available at all times, as well as 24-hour access to the scanner and MRI.

The Foundation is internationally renowned in all of its specialties. A large number of foreign patients from 45 different countries come to the hospital for treatment every year and the hospital even has an international department to make the arrangements for the care of these patients.
